

# RebootNeeded

Last Updated Saturday, 02 February 2008

This function determines if a reboot is needed due installation of patches.

Example:

```
C:\>cscript //nologo Function_RebootNeeded.vbs
```

```
No reboot required!
```

```
C:\>'*****
```

```
' Function RebootNeeded()
```

```
,
```

```
' Checks if a reboot is needed.
```

```
'*****
```

```
Function RebootNeeded() On Error Resume Next
```

```
Dim objSystemInfo
```

```
Dim flgRebootNeeded
```

```
flgRebootNeeded = False
```

```
Set objSystemInfo = WScript.CreateObject("Microsoft.Update.SystemInfo")
```

```
If Err.Number <> 0 Then
```

```
Wscript.Echo "Error creating [Microsoft.Update.SystemInfo] object 0x" & Right("0000000" & Hex(Err.Number), 8) & ": " &  
Err.Description
```

```
Err.Clear
```

```
End If
```

```
flgRebootNeeded = objSystemInfo.rebootrequired
```

```
Set objSystemInfo = Nothing RebootNeeded = flgRebootNeeded End Function '***** Example *****
```

```
If RebootNeeded() Then
```

```
Wscript.Echo "A reboot is needed to complete the installation."
```

```
Else
```

```
Wscript.Echo "No reboot required!"
```

```
End If
```
