

PatchesInstalling

Last Updated Saturday, 02 February 2008

This function determines if there are patches being installed.

Example:

```
C:\>cscript //nologo Function_PatchesInstalling.vbs
```

```
No patches are being installed.
```

```
C:\>
```

```
*****  
' Function PatchesInstalling()  
,  
' Checks if updates are currently being installed  
*****  
Function PatchesInstalling() On Error Resume Next  
  
    Dim objSystemInfo  
    Dim flgPatchesInstalling flgPatchesInstalling = False Set objSystemInfo =  
WScript.CreateObject("Microsoft.Update.Installer")  
    If Err.Number <> 0 Then  
        Wscript.Echo "Error creating [Microsoft.Update.Installer] object 0x" & Right("0000000" & Hex(Err.Number), 8) & ": " &  
Err.Description  
        Err.Clear  
    End If  
    flgPatchesInstalling = objSystemInfo.IsBusy  
    Set objSystemInfo = Nothing PatchesInstalling = flgPatchesInstalling  
  
End Function ***** Example *****  
If PatchesInstalling() Then  
    Wscript.Echo "Patches are being installed."  
Else  
    Wscript.Echo "No patches are being installed."  
End If
