

New release of the Wsuster Approval Tool

Last Updated Wednesday, 01 March 2006

Today we released version 1.0 of the Wsuster Approval Tool.

One of the major changes we made was to make the GUI resizable! The Wsuster tool should now be usable on screens with a resolution of at least 800x600. Because this was the most heard complaint we decided to fix this first before adding additional functionality to the tool. Please send us your suggestions of features missing from the original WSUS administration interface and our Wsuster Approval Tool and we will see if we can improve the tool even more!

Please review the change log for other changes which have been made.

You can download the new Wsuster Approval Tool from the Wsuster Approval Tool menu.
