

# Wsuster Approval Tool version 1.1

Last Updated Wednesday, 09 August 2006

Version 1.1 of the Wsuster Approval Tool is now available for download.

The Wsuster Approval Tool is a utility to help you approve updates which are made available from your Microsoft Windows Server Update Services (WSUS) server. Please check the change log for detailed information about this release.

Start increasing the security of your Windows infrastucture, start deploying security updates using WSUS and the Wsuster Approval Tool!

#### Important information about this release:

This version was build using Visual Studio 2005 and requires .NET Framework version 2.0 to be installed on your WSUS server. Your Microsoft Windows Server Update Services (WSUS) server will still require .NET Framework 1.1. Please make sure your WSUS implementation is configured to keep using the .NET Framework version 1.1 after installing .NET Framework version 2.0. You can check and change the settings using the Internet Information Services (IIS) Manager by opening the properties of your WSUS website and selecting the ASP.NET tab.

#### Download

The new version of the Wsuster Approval Tool can be downloaded from the Wsuster Approval Tool menu.
